

Petco Headquarters

10850 Via Frontera
San Diego, California 92127

Hundreds of pawprints ranging in size from one- to three-inches adorn 21 panels to recreate the Petco corporate logo for its headquarters' entrance. Made from 3/16" CNC Routed Aluminum with a Custom Kynar Finish, the design was made possible with the same computer-assisted machine that has perforated complex designs for building facades, parking structure ornamentation, and public space artwork. The campus look was completed with beautiful, richly multi-colored formed aluminum panels wrapping around the entire building.

KEY FEATURES

- Perforated Metal
- 1/8" Custom Kynar Finished Formed Aluminum Panels
