

San Jose Earthquakes

1123 Coleman Avenue
San Jose, California 95110

Part ticketing booths, part San Jose Earthquakes team headquarters, part entrance to Avaya Stadium — the building serves many purposes but all of them include welcoming visitors to the site. Building architects 360-CA Schrock Architects turned to Trespa panels to create the natural, inviting look of wood while achieving the lasting quality, smooth finish, and precise cuts of Trespa. The hundreds of individual Trespa panels were cut, organized, labeled, and packaged with precision to ensure quality sequencing and an installation protected from delays.
