

CSUSM Extended Learning Building

288 Campus Way
San Marcos, California 92078

Glass and metal can make a truly perfect pair — as evidenced by these railings at CSU San Marcos. In some cases utilizing component glass, in others custom-cut glass, the integration with metal railings helps keep safety at the highest levels while also maintaining an open feel to the building exteriors. Custom bent stainless steel grab rails wrap perfectly around concrete columns, ensuring visitors have a constant rail on which to grab hold.

KEY FEATURES

- Railing One: Component glass railing
- Railing Two: Custom 3/4" thick, 4-foot high glass

ROLE

Per-plan Fabrication & Installation

ARCHITECT

SAFDIE RABINES Architects

CONTRACTOR

Turner Construction
